

Quality of life of cancer patients

Author: Stog Valeria

Introduction

The study of quality of life in the context of oncology plays an important role in the clinical application by optimizing treatment methods and developing prognosis

Keywords

- quality of life
- patients
- oncology

Purpose

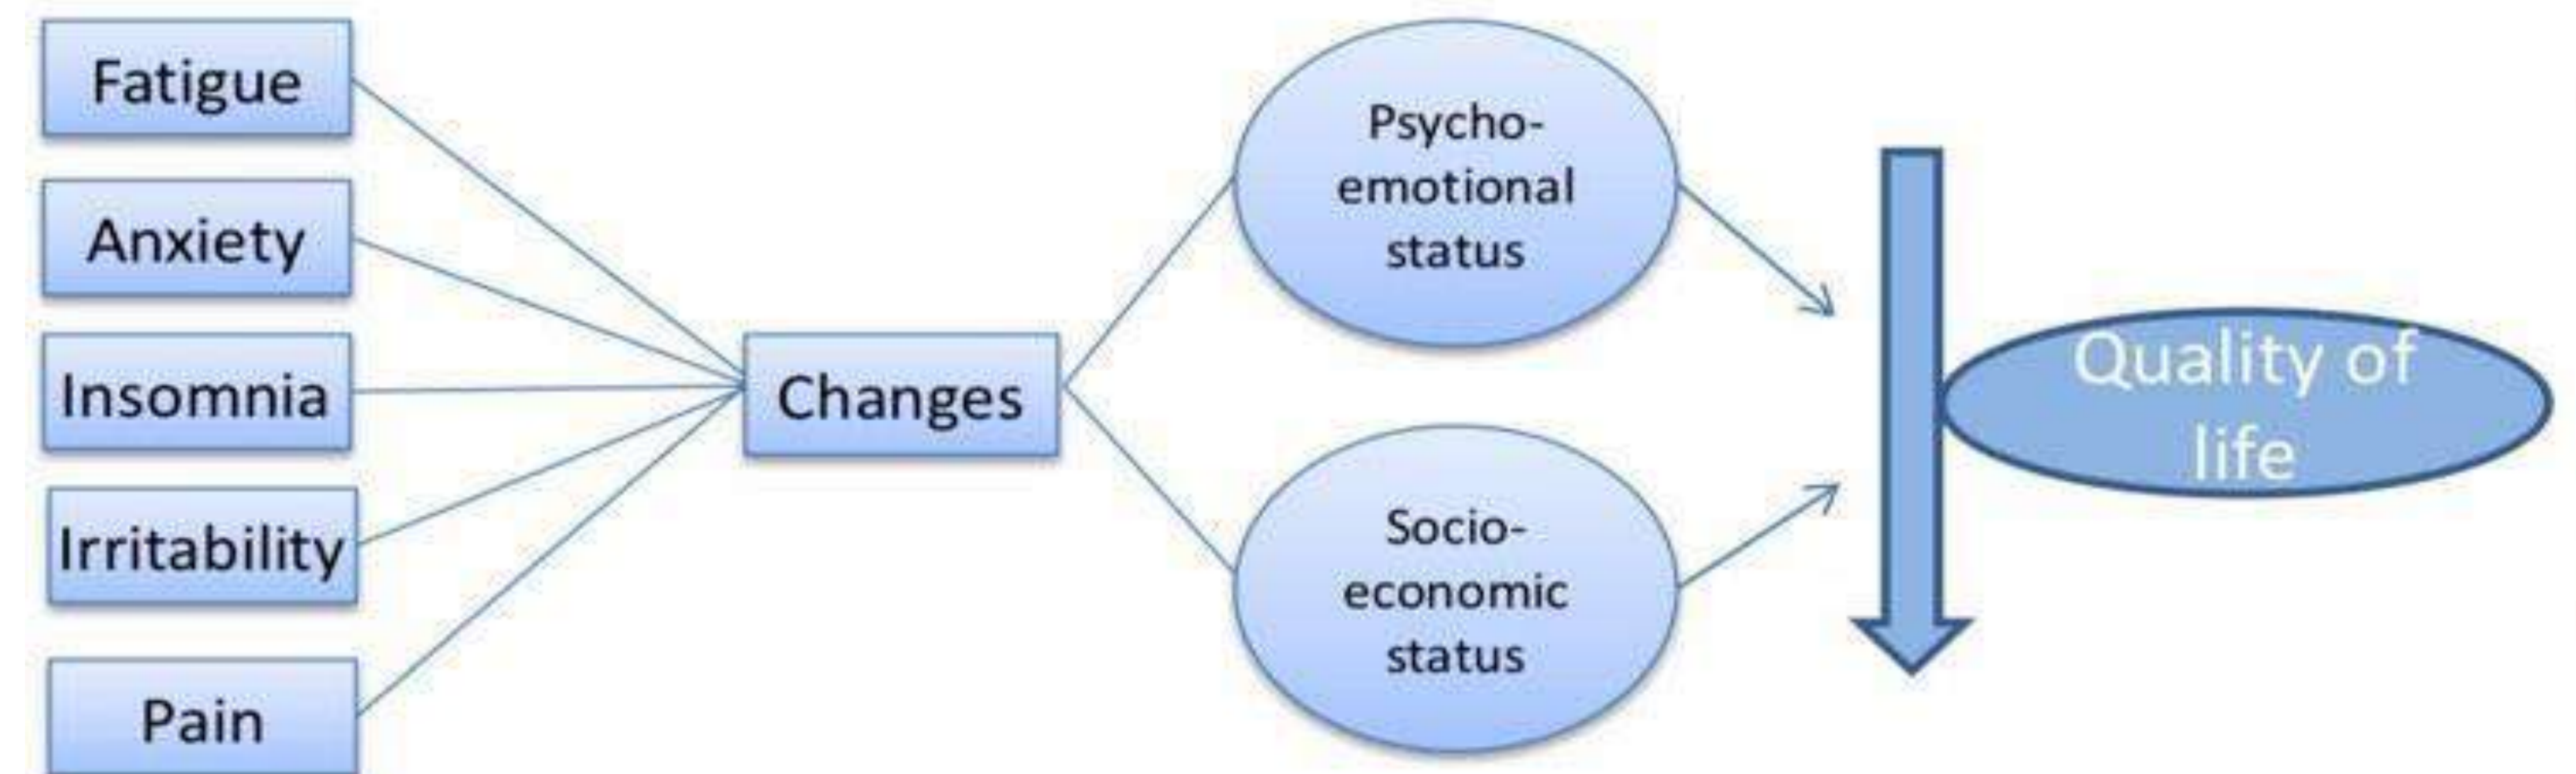

Assessing the quality of life of patients with cancer and identifying factors that cause it to decline so that they can intervene with corrective measures.

Material and methods

Results

Oncology patients measure their own health according to the quality of life that they have. Objective definition of quality of life is based on the following characteristics: stage of disease and symptoms of patient, the treatment and tolerance of side effects.

Conclusions

A significant number of patients with cancer do not reach remission!!!
