

RHEGMATOGENOUS RETINAL DETACHMENT ASSOCIATED WITH CHOROID DETACHMENT

Radu Ochinciuc

Retina Eye Clinic, Bucharest, Romania

Choroidal detachment is a complication that can be associated with retinal detachment. We present the case of a patient with retinal detachment who, at the presentation, also associated serous choroidal detachment. Theoretically, there are surgical methods that allow the drainage of fluid from the suprachoroidal space. In this case, we preferred not to drain the fluid and to attach the retina by two surgeries.
