

## ETIOLOGY OF INFECTIONS IN OBSTETRICS AND GYNECOLOGY

Bulat Julien, Discipline of microbiology and immunology, USMF "Nicolae Testemitanu"

### Introduction

Infections in obstetrics and gynecology, and mortality caused by these pathologies is a major health problem in modern medicine.

### Purpose

Study of the etiological structure of microorganisms responsible for infections in gynecology and obstetrics

### Material and methods

This present study is a review of the relevant literature data, published in online medical databases, which refer to etiology of infections in obstetrics and gynecology.

### Conclusions

Infections in gynecology and obstetrics continue to prevail among the pathologies that increases female mortality, being the most common causes of illness of the young population.

### Keywords

Microorganisms, gram-positive, gram-negative, obstetrics, gynecology.
